

Dear customers,

due to the developments of our local network providers we do have to announce for the first time the sunset of a 3G network in Europe.

The use of the 3G network in the Netherlands will not be possible anymore from January, 1st 2020 on.

The use of the 2G network should be possible at least until 2025 according to our information.

Due to the fact that most of the devices in the market are able to use 3G and 2G networks, these devices should remain working without a larger impact. Devices having 2G only capabilities will not work anymore after December 2019 with the „Crout Classic SIM“.

We are ready to support you to reduce the impact of the shutdown. We would be happy to supply you with SIM cards out of our „Crout eSIM“ portfolio which are able to use 2G-3G-4G also in the Netherlands.

Due to the 4G upgrade of our „Crout Classic SIM“, the 4G network in the Netherlands will be available after December 2019 including the possibility to use the LTE-M service.

Please do not hesitate to contact us for any further information or questions.

Best regards

Your Crout Team

we IoTivate!
